- S-system, fishery modeled as, Bioeconomic dynamics of, 99:231
- Sampling schedules for pharmacokinetic parameter estimation experiments, design of, Incorporating prior parameter uncertainty in the, 99:105 Sensitive strains in a multigroup population, A gonorrhea model treating, 98:103
- Sequences subject to recombination, Reconstructing evolution of, using parsimony, 98:185
- Serological interpretation-theoretical limits to information from blocking, 98:127
- Sex-linked locus, age-structured population with, The effective population size of, 101:121
- Single-species growth with stage structure, A time-delay model of, 101:139
- SOFTWARE REVIEW: Berryman, Alan A., **QuickBASIC**, version 4.5, for MS-DOS or MS OS/2 operating systems, 101:289
- SOFTWARE REVIEW: Davison, D., **Microsoft C compiler**, **QuickC**, and **QuickAssembler** for MS-DOS or MS OS/2 operating systems with 512K and a hard disk, 101:291
- SOFTWARE REVIEW: Fortin, Marie-Josée, Thomson, Barbara A., **Surfer**, for IBM PC, 98:149
- SOFTWARE REVIEW: Khibnik, Alexander I., **Dynamical Software I and II**, for IBM PC or compatible with graphics, 98:145
- SOFTWARE REVIEW: Levitin, Victor V., **Microsoft FORTRAN Optimizing Compiler**, version 5.0, for MS-DOS or MS OS/2 operating systems, 102:225
- SOFTWARE REVIEW: Millstein, Jeffrey A., **True BASIC**, for DOS 2 or later, 98:301
- SOFTWARE REVIEW: Penner, Richard C. II and Sugihara, George, **Mathematica**, for Macintosh with 4 megabytes (recommended), MS-DOS with 640K + 1 megabyte extended memory graphics, 101:285
- SOFTWARE REVIEW: Silvert, William, **@ Library**, for Lotus Symphony or Lotus 1-2-3, release 2, 98:305
- SOFTWARE REVIEW: Swartzman, Gordon,

- Stella for Academe**, for Macintosh and Mac II, 98:143
- Sojourn time distributions, with application to ion-channel modeling, 102:75
- Source description, the equivalent, representing the extinction of an action potential at a muscle fiber ending, 101:41
- Spatially uniform, nondepletable suspensions, a model for feeding ciliated protists on: A discrete, stochastic model for microbial filter feeding, 102:127
- Specified inputs, nonlinear systems with, parameters of, Global identifiability of: a comparison of methods, 102:41
- Speeding up the dynamic algorithm for planar RNA folding, 100:33
- Stability, global, for discrete one-dimensional population models, A note on, 102:121
- Stability, global, of two prey-predator pairs linked by competition, 99:31
- Stage structure, single-species growth with, A time-delay model of, 101:139
- State-Stationary distributions in membrane channels, 99:47
- Stationary-state distributions in membrane channels, 99:47
- Stochastic model, discrete, for microbial filter feeding: a model for feeding of ciliated protists on spatially uniform, nondepletable suspensions, A, 102:127
- Stochastic analysis of the repair of radiation-induced DNA double-strand breaks, 100:21
- Stochastic model for analyzing prevalence surveys of hepatitis A antibody, A, 98:157
- Sums, random, with application to ion-channel modeling, 102:75
- Suspensions, nondepletable, spatially uniform, a model for feeding of ciliated protists on: A discrete, stochastic model for microbial filter feeding, 102:127
- Synergistic approach to plant pattern generation, A, 98:13
- Target elimination dynamics, effects of immune cell motility and chemotaxis on, Analysis of the, 98:73
- Theoretical limits to information from blocking-Serologic interpretation, 98:127
- Theoretical studies on extinction in the gradostat, 101:1
- Theory of exciton annihilation in complexes of a finite number of molecular sites., 102:21
- Time-delay model of single-species growth with stage structure, A, 101:139
- Time distributions, sojourn, with application to ion-channel modeling, 102:75
- Time value, Biological, 100:115
- Topological analysis of metabolic control, 102:191
- Toxicity limit, cancer chemotherapy with, Some optimal control problems in, 100:49
- Transport, of oxygen, myoglobin-facilitated, in the presence of membranes, Parameter dependence of, 100:1
- Trapping problem, classical, On the, 102:183
- Trees, minimally colored, 98:201
- Two prey-predator pairs linked by competition, Uniform persistence and global stability of, 99:31
- Two-species model, persistence of: Conflict between the need to forage and the need to avoid competition, 99:181
- Uncertainty, prior parameter, Incorporating in the design of sampling schedules for pharmacokinetic parameter estimation experiments, 99:105
- Underwater visual field of aerial animals, Geometric optical investigation of, 102:1
- Uniform persistence and global stability of two prey-predator pairs linked by competition, 99:31
- Uniqueness of quasi-static solutions of some linear models of left ventricular mechanics, On the, 99:195
- Vaccination campaigns for common childhood diseases, 100:201
- Ventricular mechanics, left, some linear models of, quasi-static solutions of, On the uniqueness of, 99:195
- Visual field, underwater, of aerial animals, Geometric optical investigation of, 102:1
- Wavefront propagation, influence of fiber rotation on: Mathematical modeling of the excitation process in myocardial tissue, 101:155
- Zero, setting the clock back to property, class of life distributions having, Life expectancy for, 98:251
